Maximise Workplace Safety with Vision Shield Ai

SafeOp Limited are at the forefront of Ai camera technology delivering improved safety features for pedestrians around moving equipment.

The Vision Shield Ai Camera can be retrofitted to almost any type of machinery and is simple to transfer between machines if sold.

With the system having an IP65 rating, Vision Shield Ai is also capable of internal and external functionality making it ideal for the majority working environments.

Fish Eye Camera Setting

The Vision Shield Ai camera has a unique "Fish Eye" lens being able to cover the entire rear of a vehicle. This can be adapted and changed for all customer environments.

Ai Powered Human Detection

The Ai technology enables whole or partial human forms to be detected with no need for recognisable bracelets or special vests.

Customisable Warning Zones

The camera has 3 zones of increasing risk that can be tailored to any customers specification in both size and shape.

On-Board Screen

The on-board screen allows the driver to see where the pedestrian is located after being highlighted by an audible warning.

If you're interested in learning more about how SafeOp can help you improve safety and maximise efficiency get in touch for a demonstration or quotation.
